DESCRIPTION

Imaginative new applications in an ever-increasing marketplace have blurred the lines between landscape and living space. Join us for this exciting session to discover characteristics of both folding and sliding operable walls. You'll see typical usage, operation animations, material options, and examples of unique installations. Plus, you'll learn how independent tests verify the wall systems' resistance against the elements (including hurricanes) and gauge the impact of fresh air and daylight for building occupants. As a stunning example, you'll see how NanaWall's opening glass wall technology can provide beautifully designed spaces that connect the indoors and outdoors while still meeting demanding performance requirements.
