Title: Technology's Dark Side: New Threats to the Practice of Architecture
Date: Thursday, June 21, 2018
Time: 7:00AM-8:00AM
LU: 1 HSW

Program Summary

Technology has been a boon for architecture and design. It also may be putting you at grave risk. What can you do about it?

Firms have moved from providing basic design services to serving as sources of intellectual property shared throughout the planning, creation, and operation of capital assets. Those changes bring increased threats to firms, clients, and the public, from cybercrimes and breaches of confidentiality to negligent practices in using and protecting information.

Join experts for a critical discussion about the misuses of technology that jeopardize the security of infrastructure and building projects and violate safety, secrecy, and privacy expectations.

Learning Objectives

- A. Realize the exposure to public safety through unintended violations of information security requirements.
- B. Understand the scope of damages caused by the breach of the architect's professional or contractual duty to keep client information confidential.
- C. Recognize the endangerment of projects and firm operations because of damage to or ransoming of firm information by cyber criminals.
- D. Evaluate the harm caused by the invasion of the privacy through the improper use of photography, remote sensing, and drones.

Speakers:

Frank Musica, Assoc. AIA, Esq.
Risk Management -- Senior Specialist
Victor O. Schinnerer & Company, Inc
